Timothy Stephens
Curriculum vitae

Computational Evolutionary Biologist

Orange, New Jersey ts942@sebs.rutgers.edu Website GitHub

Research profile

Computational evolutionary biologist working at the intersection of comparative genomics, evolutionary biology, and data science. My research investigates how genes with unknown function ("dark genes") originate, diversify, and acquire biological roles. I combine comparative genomics, phylogenomic analysis, sequence- and structure-based homology detection, and multi-omics approaches to investigate gene-family evolution and prioritize functional hypotheses across diverse biological systems.

My research spans coral, algal, amoebal, bacterial, and environmental microbial systems. I develop and apply computational workflows and analytical tools that address general problems in genomic discovery, from phylogenetic classification and genome annotation to metagenomic analysis and network-based interpretation. I have led collaborative computational research, mentored graduate and undergraduate researchers, and co-founded OceanOmics, translating biological research into environmental diagnostic technologies.

Research areas

- Evolutionary genomics and gene-family evolution
- Comparative genomics, phylogenomics, and phylogenetic methods
- Origins and evolution of novel and poorly characterized genes
- Genome annotation and computational protein characterization
- Metagenomics, multi-omics, and environmental genomics
- Reproducible bioinformatics workflows and research software

Academic appointments

2024–2026	**Research Associate**, Department of Biochemistry and Microbiology, Rutgers University Supervisor: Distinguished Professor Debashish Bhattacharya. Project focuses on coral conservation and algal evolution.
2019–2024	**Post Doctoral Associate**, Department of Biochemistry and Microbiology, Rutgers University Supervisor: Distinguished Professor Debashish Bhattacharya. Project focuses on using integrated multi-omics data to study plastid evolution and endosymbiosis in the photosynthetic amoeba *Paulinella*.

Selected professional and technical experience

2026–present	**Subject-Matter Expert, Bioinformatics & Genomics (Contract)**, Micro & Snorkel AI Develop research-level question-answer sets in bioinformatics, genomics, and multi-omics for frontier AI model training and evaluation, each with supporting references, quoted evidence, and a justification that the question has a single defensible answer.

2023–present	**Co-Founder, Chief Executive Officer and subsequently Chief Technology Officer**, OceanOmics, Inc. Co-founded an environmental biotechnology company and contributed to scientific and technical leadership of environmental health diagnostic platforms. Led interdisciplinary project teams and secured more than $150,000 in seed and voucher awards.

Education

2016–2019	**PhD**, Institute for Molecular Bioscience, The University of Queensland Supervisors: Professor Mark Ragan and Dr Cheong Xin Chan.
2015	**Honours**, Institute for Molecular Bioscience, The University of Queensland Supervisors: Professor Mark Ragan and Dr Cheong Xin Chan.
2012–2015	**Bachelor of Biotechnology**, Institute for Molecular Bioscience, The University of Queensland Major: Molecular Biotechnology and Innovation Management

Computational expertise and methods

Programming and research software: *R* package development and maintenance; Python; Perl; shell-based bioinformatics scripting; reproducible analysis and version-controlled code.

Comparative and evolutionary genomics: phylogenetic and phylogenomic analysis; phylogenetic-tree screening and classification; gene-family comparison; genome annotation; sequence-based homology searches; comparative analysis of divergent genes.

Metagenomics and multi-omics: Snakemake-based workflow development; metagenomic quality control, assembly, binning, gene prediction, functional annotation, and quantification; integration of transcriptomic, proteomic, and genomic evidence.

Network analysis and data structures: graph-based network analysis using Python graph-tool; connected-component extraction, graph annotation, and network visualization.

Computational infrastructure: Linux/HPC environments; Conda/Mamba environments; SLURM-oriented workflow execution; Snakemake; Docker, Singularity, and Podman containerization.

Research software and computational tools

PhySortR — Creator and maintainer of the *R* port of a package for screening and sorting large collections of phylogenetic trees, identifying exclusive and non-exclusive clades in traditional and extended Newick formats. Available through CRAN (version 1.0.9; package DOI: 10.32614/CRAN.package.PhySortR). Original method described in Stephens et al., *PeerJ* (2016).

Dinoflagellate Annotation Workflow — Developed a workflow for protein-coding gene prediction in dinoflagellate genomes, integrating transcriptomic, proteomic, and *ab initio* gene-prediction evidence. Includes adaptations for non-standard dinoflagellate splice-site biology. Source code.

naive ATLAS — Adapted and extended the ATLAS metagenomic workflow to support recovery and analysis of microbial genomes across prokaryotes, microbial eukaryotes,

viruses, and plasmids. Workflow includes quality control, assembly, binning, gene prediction, annotation, and quantification. Source code.

Network Analysis Scripts — Python utilities using *graph-tool* for graph construction, connected-component extraction, annotation, layout calculation, and visualization. Source code.

MAGS-CodeDev — Multi-agent graph-based software-development system that decomposes code projects into dependency graphs and coordinates code generation, testing, diagnosis, review, and iteration in isolated worktrees and containers. Source code.

AgentBox — Rootless Podman-based sandbox for running coding agents in project-scoped environments with explicit filesystem and network permissions. A software-infrastructure project demonstrating work in reproducible and constrained computational environments. Source code.

Research leadership and selected projects

Evolutionary origins of coral dark genes — NSF EDGE project
Senior personnel; computational analysis and manuscript leadership. Led computational analyses investigating the evolutionary origins of conserved dark-gene families in stony corals and contributed to the project's first research paper. The work found that approximately 82% of conserved coral dark-gene families were consistent with previously undetected homology to characterized gene families.
[Related publication: Stephens et al., Genome Biology and Evolution (2026).]

Computational enzyme discovery in Sargassum-associated microbial communities — Schmidt Sciences project
Senior personnel; computational discovery. Led computational discovery and prioritization of candidate enzyme families from microbial communities associated with *Sargassum* degradation, connecting comparative genomics with potential biomass-conversion applications.
[Related publication: Nandi et al., Applied and Environmental Microbiology (2026).]

Interdisciplinary environmental diagnostic development — OceanOmics
Co-founder; scientific/technical leadership. Led or coordinated interdisciplinary teams spanning biology, computer science, engineering, and synthetic biology in the development of environmental diagnostic platforms. Contributed to project development, technical problem-solving, funding acquisition, and progression of platforms toward proof of concept.

Grants and sponsored research

2026 New Jersey CSIT Clean Tech R&D Voucher Pilot Program, $39,760 USD
Funds awarded to our startup OceanOmics to utilize government facilities to aid development of our shellfish health monitoring toolkit.
Principal Investigators: **Timothy Stephens** (Rutgers University)

2024 New Jersey CSIT Clean Tech R&D Voucher Pilot Program, $39,860 USD
Funds awarded to our startup OceanOmics to utilize government facilities to aid development of our coral health monitoring toolkit.
Principal Investigators: **Timothy Stephens** (Rutgers University)

2024 New Jersey CSIT Clean Tech Seed Grant Program, $74,870 USD
Funds awarded to our startup OceanOmics to continue development of our coral health monitoring toolkit.
Principal Investigators: **Timothy Stephens** (Rutgers University)

2023 Rutgers TechAdvance Fund, $74,842 USD
Funds to continue development of our coral health monitoring toolkit.
Principal Investigators: Debashish Bhattacharya (Rutgers University)

2023 Climate Action Grant 2023, $10,000 USD
Funds for metabolomic and transcriptomic profiling of sex hormone dysregulation in spawning corals during thermal stress.
Principal Investigators: Debashish Bhattacharya (Rutgers University)

2023 Core Facility Utilization Application 2023, $5,000 USD
Funds for metabolomic profiling of the sex hormone cycle in spawning corals.
Principal Investigators: Debashish Bhattacharya (Rutgers University)

2022 Core Facility Utilization Application 2022, $5,000 USD
Funds for sequencing of coral microbiome samples.
Principal Investigators: Debashish Bhattacharya (Rutgers University)

2022 Center for Nutrition, Microbiome, and Health Small Grant FY-22, $2,000 USD
Characterizing the coral microbiome biogeography across colonies and reefs.
Principal Investigators: Debashish Bhattacharya (Rutgers University)

2018 UQ-FAPESP Strategic Research Fund SPRINT (2018/15159-9), $20,000 (~USD $14,000)
Integrated genomic approaches to understand stress tolerance in bioethanol-producing yeasts and coral reef symbionts
Principal Investigators: Cheong Xin Chan (UQ) and Jeferson Gross (State University of Sao Paulo)

Research mentoring and supervision

Served as a day-to-day research mentor to nine graduate students and five undergraduate researchers in computational biology, genomics, and related areas.

Graduate mentorship

- Mentored three PhD students through completion.
- Each completed PhD mentee produced three to four first-author research papers during doctoral training.
- One former mentee is now an Assistant Professor.

Student-led research

- Oversaw 16 student-led research papers.
- Twelve of these papers included me as a co-first or second author.

Mentoring included research-question development, computational study design, analytical troubleshooting, interpretation, reproducibility, manuscript preparation, and knowledge transfer.

Teaching experience

2020–2026 **Co-lecturer**
Rutgers University
Design and conducted lectures on de novo next-generation genome and transcriptome sequencing, metabolomics, proteomics, metagenomics, phylogenetics, and phylogenomics in a join undergraduate and postgraduate course titled "Fundamentals of Microbial Genomics". Duties include designing and marking student' exam questions and oral presentations.

2018 **Head Practical Tutor**
University of Queensland
Duties included designing and developing assessment material for the course and organising marking of assignments.

2016–2017 **Practical Tutor**
University of Queensland
Duties included assisting students with the completion of set questions and marking of assignments.

2013 **Science Mentor**
University of Queensland
Duties included organizing and running first year science student introduction and social engagement events designed to inform students about study/research opportunities available at The University of Queensland.

2013–2014 **Peer Assisted Study Session (PASS) Tutor**
University of Queensland
Duties included planning and leading multiple weekly tutorial sessions, each comprising 20-30+ students.

2012–2014 **CASPiE Tutor**
University of Queensland
Duties included guiding undergraduate chemistry students through an advanced set of research-focused practicals, with the aim of developing their critical and experimental thinking.

Professional development

2024 NSF I-Corps Regional Workshop, Rutgers University
2017 Research Commercialisation Workshop, University of Queensland
2017 UQ Idea Hub, University of Queensland

Awards and honours

2023 Selected to attend and present at the New Phytologist Next Generation Scientists Conference 2023, National University of Singapore
2021 2019 Dean's Award for Outstanding Higher Degree by Research Theses, University of Queensland
2018 Registration award for Society for Molecular Biology & Evolution (SMBE) 2018, SMBE
2017 Won best pitch prize at the UQ Idea Hub, University of Queensland
2016 Research Training Program (RTP) scholarship, University of Queensland
2016 Top poster prize at the IMB Research Higher Degree Student Symposium, University of Queensland
2012 Selected for the Advanced Study Program in Science (ASPinS; based on academic merit), University of Queensland
2012 Dean's Commendation for Academic Excellence (achieved a GPA over 6.6), University of Queensland
2011 Merit Scholarship for academic achievement, University of Queensland

2022 **Stephens T. G.**, Williams A., Shumaker A., and Bhattacharya D. Integration of multi-omics coral data under thermal stress . *4th Institute for Food, Nutrition, and Health*. 4th November 2022, Rutgers University, New Jersey, USA.

2022 **Stephens T. G.**, Strand E. L., Putnam H. M., and Bhattacharya D. Differences in ploidy and the prevalence of clonal propagation between *Montipora capitata* and *Pocillopora acuta* from Kane'ohe Bay, Hawai'i. *15th International Coral Reef Symposium*. 3-8th July 2022, Bremen, Germany.

2022 **Stephens T. G.**, Etten J. V., McDermott T., and Bhattacharya D. Analysis of environmental meta-omics data from the extremophilic red algae Cyanidiophyceae. *Joint Aquatic Sciences Meeting*. 14-20th May, 2022, Grand Rapids, USA.

2021 **Stephens T. G.**, Calatrava V., Gabr A., Grossman A., and Bhattacharya D. Insights into the evolution of a primary endosymbiosis through analysis of the *Paulinella* genome. *75th Annual Meeting of the Phycological Society of America*. 13-22nd July 2021, online.

2021 **Stephens T. G.**, Calatrava V., Gabr A., Grossman A., and Bhattacharya D. Insights into the evolution of a primary endosymbiosis through analysis of the *Paulinella* genome. *12th International Phycological Congress*. 22-26th March 2021, Chile.

2019 **Stephens T. G.**, Bhattacharya D., Ragan M. A., and Chan C. X. *Polarella* genomics: understanding the evolutionary transition to algal symbiosis and cold adaptation. *Joint Academic Microbiology Seminars* (*JAMS*). 9th April 2019, Brisbane, Australia.

2018 **Stephens T. G.**, Bhattacharya D., Ragan M. A., and Chan C. X. *Polarella* genomics: understanding the evolutionary transition to algal symbiosis and cold adaptation. *Botany Department, Biosciences Institute, University of Sao Paulo*. 14th December 2018, Sao Paulo, Brazil.

2018 **Stephens T. G.**, Bhattacharya D., Ragan M. A., and Chan C. X. *Polarella* genomics: understanding the evolutionary transition to algal symbiosis and cold adaptation. *2nd Bioenergy Workshop, UNESP-USP-UNICAMP Integrated Postgraduate Program in Bioenergy, Institute for Research in Bioenergy, State University of Sao Paulo* (*UNESP*). 6th December 2018, Sao Paulo, Brazil.

2017 **Stephens T. G.**, Bhattacharya D., Ragan M. A. and Chan C. X. Insights into coral reef symbiosis from the genome of cold-adapted algae. *EMBL Australia Postgraduate Symposium 2017*, 29th November-1st December 2017, Sydney, Australia.

Poster presentations

2024 **Stephens T. G.**, Etten J. V., McDermott T. R., and Bhattacharya D. Cyanidiophyceae: The Extremophilic Red Algae That Underpin Hot Spring Microbial Communities In Yellowstone National Park. *Eastern Regional Photosynthesis Conference 2024*. 12-14th April 2024, Marine Biological Laboratory, Massachusetts, USA.

2024 **Stephens T. G.**, Calatrava V., Gabr A., Grossman A., and Bhattacharya D. Exploring the origin and evolution of primary plastids using *Paulinella* as a model system. *RUMP Annual Retreat 2024*. 16th March 2024, Rutgers University, New Jersey, USA.

2023 **Stephens T. G.**, Chille E., Wong K., Andrade N., Hulett R., Cleves P., Bhattacharya D., Traylor-Knowles N. Shining a light on "dark" proteins in corals. *NSF EDGE PI Meeting 2023*. 10-11th October 2023, Alexandria, Virginia, USA.

2023 **Stephens T. G.**, Calatrava V., Gabr A., Grossman A., and Bhattacharya D. Exploring the origin and evolution of primary plastids using *Paulinella* as a model system. *JGI Annual User Meeting 2023*. 21-24th August 2023, JGI, Berkeley, California, USA.

2018 **Stephens T. G.**, Bhattacharya D., Ragan M. A., and Chan C. X. *Polarella* genomics: understanding cold adaptation and evolutionary transition to symbiosis in dinoflagellates. *Society for Molecular Biology & Evolution* (*SMBE*) *annual meeting 2018*, 8-12th July 2018, Yokohama, Japan.

2016 **Stephens T. G.**, Chan C. X., and Ragan M. *Polarella* genomics: understanding the evolutionary transition to algal symbiosis and cold adaptation, *IMB Research Higher Degree Student Symposium*, 13th Jul 2016, The University of Queensland, Brisbane, Australia.

Selected research coverage

2026 Our paper Crawling under the radar: Two novel *Paulinella* species expand knowledge about the ecology and evolution of a primary plastid?containing amoeba lineage covered by The New York Times

2026 Our Sargassum Biofuel project was featured by Rutgers News

2026 Our paper Gene transfer drives community cooperation in geothermal habitats was featured in an article by Phys.org

2026 Our paper Shifts in the microbiome and virome are associated with stony coral tissue loss disease (SCTLD) was covered by Rutgers Climate and Energy Institute

2025 Our paper Metaproteome Analysis of Short-Term Thermal Stress in Three Sympatric Coral Species Reveals Divergent Host Responses was covered by Rutgers Newsroom

2024 News release by the New Jersey CSIT announcing the recipients of the Clean Tech Seed Grant, which includes our company, OceanOmics.

2024 Our Sargassum Biofuel project was featured by Rutgers News

2024 Our paper Viruses associated with extremophilic red algal mats reveal signatures of early thermal adaptation was featured by Science

2023 Our paper A *k*-mer-Based Approach for Phylogenetic Classification of Taxa in Environmental Genomic Data won the Publisher's Award for Excellence in Systematic Research

2022 Our paper Retrotransposition facilitated the establishment of a primary plastid in the thecate amoeba *Paulinella* covered by Rutgers Research

2022 Article by Rutgers Research on our short film The Coral Holobiont Response to Climate Change which won Best Trailer in the Kiez Berlin Film Festival.

2021 Our paper Why is primary endosymbiosis so rare? was covered by Rutgers Newsroom. We also produced two animated videos: Video 1, Video 2

2020 Our paper Amoeba Genome Reveals Dominant Host Contribution to Plastid Endosymbiosis covered by Rutgers Today

Academic service

2023–present Associate Editor: Symbiotic and Parasitic Protists section, Frontiers in Protistology

Patents and intellectual property

2023 Provisional Patent "Protein Markers of Coral Stress" (5431.1025-000:2023-098) Non-provisional US Patent filed 2024/03/27

2023 Provisional Patent "Coral Rapid Strip Test" (5431.1024-000:2023-097)
